Introduction

Welcome to FIT9015 Data Structures and Algorithms for Semester 2, 2010. This level-9 unit has been designed to provide you understanding of how data is stored to achieve higher efficiency while developing algorithms to solve programming problems in the IT profession. It explores wide range of data structures and algorithms with emphasis on applying the knowledge into programming applications.

Unit synopsis

Algorithm analysis. Application and implementation of some common data structures: stacks, queues, lists, priority queues, tables, sets and collections. Data representations including: arrays, linked lists, heaps, trees (including balanced trees) and hashing. Design of application programs making use of common data structures. Design and implementation of new data structures. Study of advanced algorithms in areas such as: graph theory, pattern searching and data compression. Access to the Universitys computer systems through an Internet service provider is compulsory for off-campus students.

Learning outcomes

At the completion of this unit students will have:

- the ability to analyse simple algorithms to work out an order of magnitude estimate of running time and space;
- familiarity with some of the most common data structures: stacks, queues, lists, priority queues, tables, sets, collections;
- the ability to implement these data structures using various common data representations: arrays, linked lists, heaps, trees (including balanced trees), hashing;
- the ability to evaluate which implementation would be most appropriate for a given data structure and application;
- the ability to apply the same principles used in implementing the common data structures to implement other data structures;
- the ability to design and implement new data structures;
- an understanding of some more advanced algorithms in areas such as: graph theory (shortest path etc), pattern searching, data compression (precise selection of advanced algorithms will vary from year to year);
- the ability to design new algorithms to solve new problems;
- an enjoyment of programming as an intellectual exercise;
- appreciation of the elegance of certain data structures and algorithms as a form of art;
- an interest in understanding how data structures and algorithms are implemented rather than merely using other peoples implementations (and consequently a preference for open source software).

Workload

For on campus students, workload commitments are:

- two-hour lecture;
- two-hour tutorial/laboratory (requiring advance preparation); and
- a minimum of 2-3 hours of personal study per one hour of contact time in order to satisfy the reading and assignment expectations.
You will need to allocate up to 5 hours per week in some weeks, for use of a computer, including time for newsgroups/discussion groups.

Off-campus students generally do not attend lecture and tutorial sessions, however, you should plan to spend equivalent time working through the relevant resources and participating in discussion groups each week.

Unit relationships

Prerequisites

One of FIT9013, GCO9808, GCO1812, FIT1007 or FIT2034

Prohibitions

CSE2304, FIT2009, GCO2817, GCO3512, FIT2004, and GCO9807
Teaching and learning method

Teaching approach

The approach to teaching and learning include a weekly two-hour lecture and a two-hour (tutorial/laboratory). Additionally, each student should spend a minimum of 8 to 12 hours for personal study every week and should allocate up to 5 hours per week in some weeks for use of a computer, including time for newsgroup and discussion.

Timetable information

For information on timetabling for on-campus classes please refer to MUTTS, http://mutts.monash.edu.au/MUTTS/

Tutorial allocation

On-campus students should register for tutorials/laboratories using the Allocate+ system: http://allocate.its.monash.edu.au/

Unit Resources

Prescribed text(s) and readings

Text books are available from the Monash University Book Shops. Availability from other suppliers cannot be assured. The Bookshop orders texts in specifically for this unit. You are advised to purchase your text book early.

Recommended text(s) and readings

Required software and/or hardware

Java SE JDK version 1.5 (also known as version 5) or later.

This software is included in the GSIT Unit Software CD-ROM, which will be sent to all students.

The software may also be downloaded free from http://java.sun.com

Equipment and consumables required or provided

Students studying off-campus are required to have the minimum system configuration specified by the Faculty as a condition of accepting admission, and regular Internet access. On-campus students, and those studying at supported study locations may use the facilities available in the computing labs. Information about computer use for students is available from the ITS Student Resource Guide in the Monash University Handbook. You will need to allocate up to 8 hours per week for use of a computer, including time for newsgroups/discussion groups.

Study resources

Study resources we will provide for your study are:

- A Unit Book containing 11 study guides at MUSO.
- This Unit Information outlining the administrative information for the unit.
- A CD-ROM (possibly sent at the start of the year if you were enrolled in a first semester unit that required it) with software required for all units (this includes all the software required to complete this unit).
- A unit web page at MUSO where lecture slides, weekly tutorial requirements, assignment specifications, sample solutions and supplementary material will be posted.
- Discussion groups at MUSO.
Assessment

Overview

Examination (3 hours): 60%; In-semester assessment: 40%

Faculty assessment policy

To pass a unit which includes an examination as part of the assessment a student must obtain:

- 40% or more in the unit’s examination, and
- 40% or more in the unit’s total non-examination assessment, and
- an overall unit mark of 50% or more.

If a student does not achieve 40% or more in the unit examination or the unit non-examination total assessment, and the total mark for the unit is greater than 50% then a mark of no greater than 49-N will be recorded for the unit.

The unit is assessed with two assignments and a three hour closed book examination. To pass the unit you must:

- attempt both assignments and the examination
- achieve no less than 40% of the possible average marks in the two assignments
- achieve no less than 40% of the possible marks in the exam
- achieve no less than 50% of possible marks

Assignment tasks

Assignment coversheets

Assignment coversheets are available via “Student Forms” on the Faculty website: http://www.infotech.monash.edu.au/resources/student/forms/

You MUST submit a completed coversheet with all assignments, ensuring that the plagiarism declaration section is signed.

Assignment submission and return procedures, and assessment criteria will be specified with each assignment.

Assignment submission and preparation requirements will be detailed in each assignment specification. Submission must be made by the due date otherwise penalties will be enforced. You must negotiate any extensions formally with your campus unit leader via the in-semester special consideration process: http://www.infotech.monash.edu.au/resources/student/equity/special-consideration.html.

• Assignment task 1

Title: Assignment 1

Description: Students will be required to perform a number of tasks involving both analytical and practical (computer programming) skills from the syllabus covered in Study Guides 1-4.

Weighting: 20%
Criteria for assessment:
The specification and marking criteria will be released in MUSO four teaching weeks in advance of the due date. Solutions will be released after the cut-off date, which is one week after the due date.

Due date:
30 August 2010

• Assignment task 2

Title:
Assignment 2

Description:
Students will be required to perform a number of tasks involving both analytical and practical (computer programming) skills from the syllabus covered in Study Guides 5-8.

Weighting:
20%

Criteria for assessment:
The specification and marking criteria will be released in MUSO four teaching weeks in advance of the due date. Solutions will be released after the cut-off date, which is one week after the due date.

Due date:
4 October 2010

Examination

•

Weighting:
60%

Length:
3 hours

Type (open/closed book):
Closed book

Electronic devices allowed in the exam:
None

See Appendix for End of semester special consideration / deferred exams process.

Due dates and extensions

Please make every effort to submit work by the due dates. It is your responsibility to structure your study program around assignment deadlines, family, work and other commitments. Factors such as normal work pressures, vacations, etc. are not regarded as appropriate reasons for granting extensions. Students are advised to NOT assume that granting of an extension is a matter of course.

Students requesting an extension for any assessment during semester (eg. Assignments, tests or presentations) are required to submit a Special Consideration application form (in-semester exam/assessment task), along with original copies of supporting documentation, directly to their lecturer within two working days before the assessment submission deadline. Lecturers will provide specific outcomes directly to students via email within 2 working days. The lecturer reserves the right to refuse late applications.

A copy of the email or other written communication of an extension must be attached to the assignment submission.
Late assignment

- An assignment must be submitted by the cut-off date, which is usually seven days after the due date. Any assignment submitted after the cut-off date will not be accepted by the MUSO system and therefore, it will be marked automatically to zero.
- Any assignment submitted after the due date will be penalised by 5% of the full marks for each 24 hours of delay.
- This policy is strict because comments or guidance will be given on assignments as they are returned, and sample solutions may also be published and distributed, after assignment marking or with the returned assignment.

Return dates

Students can expect assignments to be returned within two weeks of the submission date or after receipt, whichever is later.

Feedback

Types of feedback you can expect to receive in this unit are:

Informal feedback on progress in labs/tutes

Graded assignments with comments

Solutions to tutes, labs and assignments
