FIT1040 Programming fundamentals - Semester 1, 2014

This unit will provide students with an overview of the fundamentals required to create programs. Students will learn to develop descriptions of algorithms and program logic using pseudocode which will be implemented as working software programs using a visual procedural programming language. The unit will explore a variety of application domains including: computer games, business and science applications, computer generated arts, computer-based simulations and the control of simple robots. The topics covered will include the fundamental concepts: data types and structures, basic types of input and output, program control structures, and modular design along with the basics of event-driven programming and objects. These topics will be covered while placing an emphasis on the need to design program code that is easy to maintain, readable, tested, and well documented.

At the end of the unit students will be expected to be able to apply the knowledge and skills learned in further units that cover software development using industry strength programming languages.

Mode of Delivery

• Caulfield (Day)
• Clayton (Day)
• Gippsland (Off-campus)
• Malaysia (Day)
• South Africa (Day)

Workload Requirements

Minimum total expected workload equals 12 hours per week comprising:

(a.) Contact hours for on-campus students:

• 2 hours of lectures
• One 2-hour laboratory
• One 1-hour tutorial

(b.) Study schedule for off-campus students:

• Off-campus students generally do not attend lecture and tutorial sessions, however should plan to spend equivalent time working through the relevant resources and participating in discussion groups each week.

(c.) Additional requirements (all students):

• A minimum of 7 hours independent study per week for completing lab and project work, private study and revision.

Your feedback to Us

Monash is committed to excellence in education and regularly seeks feedback from students, employers and staff. One of the key formal ways students have to provide feedback is through the Student Evaluation of Teaching and Units (SETU) survey. The University’s student evaluation policy requires that every unit is evaluated each year. Students are strongly encouraged to complete the surveys. The feedback is anonymous and provides the Faculty with evidence of aspects that students are satisfied and areas for improvement.

For more information on Monash’s educational strategy, see:
Student feedback about this unit - which is new - has been very positive. There will be minor adjustments to the presentation of the content. One irritation that students have noted is that the tutorial exercises took longer than the hour allocated. That will be adjusted in this offering.

Staff watched the progress of students who completed this unit closely. The unit provided to be an excellent introduction to programming for students undertaking further study in units with an "industrial" language in semester 2. Staff in subsequent units noted that students in those units were a little thrown when they first had to code by typing their code in an exact syntax. The final weeks of this unit will be adjusted slightly to help students transition a little more smoothly to an industrial language.

If you wish to view how previous students rated this unit, please go to https://emuapps.monash.edu.au/unitevaluations/index.jsp
Academic Overview

Learning Outcomes

At the completion of this unit students will have: An understanding of:

- the relationship between a problem description and program design;
- the use of design representations;
- the sequence of steps that a computer takes to translate source code into executable code; and
- primitive data types and basic data structures.

Developed attitudes that enable them to:

- adopt a problem-solving approach;
- recognise the importance of programming and documentation conventions;
- act in accordance with best practice, industry standards and professional ethics.

Developed the skills to:

- use diagrams to design solutions for programming problems;
- apply problem solving strategies;
- use pseudo-code to design algorithms;
- create and test simple computer programs;
- analyse and debug existing programs; and
- write a test plan.

Demonstrated the communication skills necessary to:

- produce documentation for a program; and
- explain an existing program.

**Teaching Approach**

Lecture and tutorials or problem classes

This teaching and learning approach helps students to initially encounter information at lectures, discuss and explore the information during tutorials, and practice in a hands-on lab environment.

**Assessment Summary**

Examination (3 hours): 60%; In-semester assessment: 40%

Assessment Tasks

Participation

• Assessment task 1

  Title:
  Programming Basics

  Description:
  This assignment will require the development of a software application with Scribble that
  reacts to user interface events, taking input from a user and then performing a complex
calculation. The task will require creating a programming solution to a calculation-based
problem, creating software that reacts to an event, makes decisions with a IF-THEN-ELSE
logic, stores user input in variables, and makes calculations using variables.

  Weighting:
  10%

  Criteria for assessment:
  Detailed assessment criteria will be provided on the unit web site along with full details of
  the assignment task.

    1. The application must run correctly. Evidence of testing is required.
    2. The application must meet the problem specification.
    3. The application logic should be documented with a flowchart.
    4. The application sprites and scripts should be constructed in a way that makes
       them easy to understand and maintain.
    5. Students should be able to answer questions about their own work.

  Due date:
  Sunday Midnight (local time) Week 7

• Assessment task 2

  Title:
  Advanced Programming Application

  Description:
  This assignment will require the development of a software application with Scribble that
  implements a single-user game. The task will require creating an abstraction of the game
state and changing that state as the user plays the game. This will require the creation of
appropriate data structures to store the game state, the player's movers, and scripts that
represent the game rules. The software will make decisions with a IF-THEN-ELSE logic,
process data using loop-based logic, and display appropriate status updates as the game
is played, won or lost.

  Weighting:
Assessment Requirements

10%

Criteria for assessment:
Detailed assessment criteria will be provided on the unit web site along with full details of the assignment task.

1. The application must run correctly. Evidence of testing is required.
2. The application must meet the problem specification.
3. The application logic should be documented with a flowchart.
4. The application sprites and scripts should be constructed in a way that makes them easy to understand and maintain.
5. Students should be able to answer questions about their own work during an interview scheduled outside the lab class.

Due date:
Sunday Midnight Week 11; Interviews held in Week 12

• Assessment task 3

Title:
Laboratory and short tutorial tests

Description:
In Weeks 2 - 11 students will be expected to write and execute code to perform a task specified at the start of their Laboratory session. The specified coding task will come from a Laboratory task specification sheet released prior to each Laboratory session allowing for preparation.

Students will be expected to complete a very short test at the end of each Tutorial session. The test will ask 5 short answer questions on the lecture material for the week the Tutorial is based on.

Weighting:
20%

Criteria for assessment:
Laboratory work will be assessed during the Laboratory session. Full marks will require both working code and good coding style with the latter carrying more weight.

Tutors will mark tutorial short tests after the tutorial. The questions will examine both conceptual and practical knowledge covered in the lecture slides relevant to the tutorial. Required answers will be short and generally attract a mark of 0 or 1 (scaled appropriately for inclusion into the final mark for the unit).

Due date:
The end of the tutorial or laboratory session in Weeks 2 - 11 in which the work is performed.

Examinations

• Examination 1

Weighting:
60%

Length:
3 hours

Type (open/closed book):
Closed book

Electronic devices allowed in the exam:
Assessment Requirements

None

Faculty of Information Technology Style Guide

Feedback to you

Examination/other end-of-semester assessment feedback may take the form of feedback classes, provision of sample answers or other group feedback after official results have been published. Please check with your lecturer on the feedback provided and take advantage of this prior to requesting individual consultations with staff. If your unit has an examination, you may request to view your examination script booklet, see
http://intranet.monash.edu.au/infotech/resources/students/procedures/request-to-view-exam-scripts.html

Types of feedback you can expect to receive in this unit are:

- Informal feedback on progress in labs/tutes
- Graded assignments with comments
- Interviews
- Test results and feedback
- Quiz results
- Solutions to tutes, labs and assignments
Assessment Requirements

Extensions and penalties

Submission must be made by the due date otherwise penalties will be enforced.

You must negotiate any extensions formally with your campus unit leader via the in-semester special consideration process: http://www.monash.edu.au/exams/special-consideration.html

Returning assignments

Students can expect assignments to be returned within two weeks of the submission date or after receipt, whichever is later.

Assignment submission

It is a University requirement for students to submit an assignment coversheet for each assessment item. Faculty Assignment coversheets can be found at http://www.infotech.monash.edu.au/resources/student/forms/. Please check with your Lecturer on the submission method for your assignment coversheet (e.g. attach a file to the online assignment submission, hand-in a hard copy, or use an online quiz). Please note that it is your responsibility to retain copies of your assessments.

Online submission

If Electronic Submission has been approved for your unit, please submit your work via the learning system for this unit, which you can access via links in the my.monash portal.

Policies

Monash has educational policies, procedures and guidelines, which are designed to ensure that staff and students are aware of the University’s academic standards, and to provide advice on how they might uphold them. You can find Monash’s Education Policies at: www.policy.monash.edu.au/policy-bank/academic/education/index.html

Key educational policies include:

- Student Academic Integrity Policy and Student Academic Integrity: Managing Plagiarism and Collusion Procedures; http://www.policy.monash.edu/policy-bank/academic/education/conduct/student-academic-integrity-policy.html
- Special Consideration; http://www.policy.monash.edu/policy-bank/academic/education/assessment/special-consideration-policy.html
- Grading Scale; http://www.policy.monash.edu/policy-bank/academic/education/assessment/grading-scale-policy.html
- Discipline: Student Policy; http://www.policy.monash.edu/policy-bank/academic/education/conduct/student-discipline-policy.html
- Academic Calendar and Semesters; http://www.monash.edu.au/students/dates/
- Orientation and Transition; http://intranet.monash.edu.au/infotech/resources/students/orientation/

Faculty resources and policies

Important student resources including Faculty policies are located at http://intranet.monash.edu.au/infotech/resources/students/

Graduate Attributes Policy

http://www.policy.monash.edu/policy-bank/academic/education/management/monash-graduate-attributes-policy.html

Student Charter

Student services

The University provides many different kinds of support services for you. Contact your tutor if you need advice and see the range of services available at http://www.monash.edu.au/students. For Malaysia see http://www.monash.edu.my/Student-services, and for South Africa see http://www.monash.ac.za/current/.
Monash University Library

The Monash University Library provides a range of services, resources and programs that enable you to save time and be more effective in your learning and research. Go to www.lib.monash.edu.au or the library tab in my.monash portal for more information. At Malaysia, visit the Library and Learning Commons at http://www.lib.monash.edu.my/. At South Africa visit http://www.lib.monash.ac.za/.

Disability Liaison Unit

Students who have a disability or medical condition are welcome to contact the Disability Liaison Unit to discuss academic support services. Disability Liaison Officers (DLOs) visit all Victorian campuses on a regular basis.

- Website: http://www.monash.edu/equity-diversity/disability/index.html
- Telephone: 03 9905 5704 to book an appointment with a DLO; or contact the Student Advisor, Student Community Services at 03 55146018 at Malaysia
- Email: dlu@monash.edu
- Drop In: Equity and Diversity Centre, Level 1, Building 55, Clayton Campus, or Student Community Services Department, Level 2, Building 2, Monash University, Malaysia Campus

Other

Recognition of Prior Learning

Prior to the start of semester, students who have advanced programming skills are invited to attempt an on-line based assessment of their existing skills, knowledge and ability. Students who obtain a pass grade may choose to enroll in a more advanced programming unit in place of FIT1040 and receive an exemption (but not credit) for FIT1040.

The on-line test can be found at http://dsslab.infotech.monash.edu.au:8080/moodle/
